BOX II. OBSERVATIONS WHERE UNITY OF INVENTION WAS LACKING

This ISA found multiple inventions as follows:

Group I - Compounds & Process where  $Y_2=CH$ ,  $Y_1=N$ .

Claims 1-7 (part), 26-32 (part)

Group II - Compounds & Process where  $Y_2=N$ ,  $Y_1=N$

Claims 1-6 (part) and 26-32 (part)

Group III - Compounds where  $Y_2=CH$ ,  $Y_1=CH$

Claims 8-13, 15-19, 21-24 and 26-32 (part)

Group IV - Compounds where  $Y_2=N$ ,  $Y_1=CH$

Claims 26-32 (part)

Claims 14, 20 and 25 are improperly dependent as they are outside the scope of the independent claim from which they depend. However, a search of the compound of claim 7 will also afford a search of claims 14, 20 and 25.

The inventions listed as Groups I, II, III and IV do not relate to a single inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The description sets forth that the dialkoxy benzyl is well known in the art. Therefore, it cannot constitute a special technical feature within the meaning of PCT 13.2 as it is not a contribution over the art.

Thus, the special technical feature would appear to reside in the heterocycle attached to the dialkoxy benzyl moiety, however, these heterocycles lack a common core as defined below:

Group I: Imidazotriazine

Group II: Purine

Group III: Imidazopyridines

Group IV: Imidazopyridazines.

In addition, these compounds do not belong to a recognized class of chemical compounds.
